

DSA intervention

Imaging required for imaging biobank			
All series and images acquired during intervention			obligatory
Data acquisition			
Projections	complete skull, including the ipsilateral intracranial arteries		obligatory
	extracranial carotid artery if pathology present and/or extracranial intervention performed		
Direction projections	Pre - intervention	AP + lateral	obligatory
	During - intervention	Local practice	
	Post - intervention	AP + lateral	obligatory
Contrast Phases	pre- and post-intervention DSA contrast bolus: from begin of arterial phase to end of venous phase (opacification of the superior sagittal and transverse sinus)		obligatory
Contrast media	concentration	≥ 300mg iodine / L	obligatory
Images/second	3 frames/s (at least in the first 4 seconds)		preferred
Image reconstruction			
Subtraction images			obligatory
Mask			preferred
Original images			preferred
